# NETSUITE + MAGENTO
Making your business E-Commerce Ready

3EN's Magento Plugin for the UNIO integration platform enables customers to utilise Magento through NetSuite. This means that your E-Commerce function is streamlined and can be managed via NetSuite.

The plugin allows the integration of multiple Magento Sites to a single NetSuite Account. Moreover, each site can be mapped to individual subsidiaries within the single NetSuite Account, with specific business logic for each subsidiary if required.

Using the UNIO plugin, your data (refer to diagram on right) can be managed with ease and full transparency. UNIO is there to ensure that NetSuite is kept up- to-date and there isn't disparity created in your eco system.

unio + Magento®
